Key Estate Planning Documents

What's New in the College World?

Have you checked your tax withholding lately?

Do I need to pay estimated tax?

Market Strategies: Three Ways to Play Defense in Your Stock Portfolio

Defensive investment strategies share a common goal — to help a portfolio better weather an economic downturn and/or bouts of market volatility. But there are some key differences,

including the specific criteria by which particular stocks are selected. If you are nearing retirement or just have a more conservative risk tolerance, one of these defensive strategies may help you manage risk while maintaining a robust equity portfolio.

Tilt toward value

Growth and value are opposite investment styles that tend to perform differently under different market conditions. Value stocks are associated with companies that appear to be undervalued by the market or are in an out-of-favor industry. These stocks may be priced lower than might be expected in relation to their earnings, assets, or growth potential, but the broader market is expected to eventually recognize the company's full potential.

Established companies are more likely than younger companies to be considered value stocks. These firms may be more conservative with spending and emphasize paying dividends over reinvesting profits. Unlike value stocks, growth stocks may be priced higher in relation to current earnings or assets, so investors are essentially paying a premium for growth potential. This is one reason why growth stocks are typically considered to carry higher risk than value stocks.

Seek dividends

Whereas stock prices are often unpredictable and may be influenced by factors that do not reflect a company's fiscal strength (or weakness), dividend payments tend to be steadier and more directly reflect a company's financial position. Comparing current dividend yields, and a company's history of dividend increases, can be helpful in deciding whether to invest in a stock or stock fund.

The flip side is that dividend-paying stocks may not have as much growth potential as

non-dividend payers, and there are times when dividend stocks may drag down, not boost, portfolio performance. For example, dividend stocks can be sensitive to interest rate changes. When rates rise, the higher yields of lower risk fixed-income investments may become more appealing, placing downward pressure on dividend stocks.

Temper volatility

All stocks are volatile to some degree, but some have been less volatile historically than others. Certain mutual funds and exchange-traded funds (ETFs) labeled "minimum volatility" or "low volatility" are constructed with an eye toward reducing risk during periods of market turbulence.

One commonly used measure of a stock or stock fund's volatility is its beta, which is typically published with other information about an investment. The U.S. stock market as a whole is generally considered to have a beta of 1.0. In theory, an investment with a beta of 0.8 might experience only 80% of losses during a downswing — and thus would have less ground to regain when the market turns upward again.

The return and principal value of all investments fluctuate with changes in market conditions. Shares, when sold, may be worth more or less than their original cost. Investing in dividends is a long-term commitment. The amount of a company's dividend can fluctuate with earnings, which are influenced by economic, market, and political events. Dividends are typically not guaranteed and could be changed or eliminated. Low-volatility funds vary widely in their objectives and strategies. There is no guarantee that they will maintain a more conservative level of risk, especially during extreme market conditions.

Mutual funds and exchange-traded funds are sold by prospectus. Please consider the investment objectives, risks, charges, and expenses carefully before investing. The prospectus, which contains this and other information about the investment company, can be obtained from your financial professional. Be sure to read the prospectus carefully before deciding whether to invest.

Key Estate Planning Documents

There are four key estate planning documents almost everyone should have regardless of age, health, or wealth: a durable power of attorney, advance medical directives, a will, and a letter of instruction.

Estate planning is the process of managing and preserving your assets while you are alive, and conserving and controlling their distribution after your death. There are four key estate planning documents almost everyone should have regardless of age, health, or wealth. They are: a durable power of attorney, advance medical directives, a will, and a letter of instruction.

Durable power of attorney

Incapacity can happen to anyone at any time, but your risk generally increases as you grow older. You have to consider what would happen if, for example, you were unable to make decisions or conduct your own affairs. Failing to plan may mean a court would have to appoint a guardian, and the guardian might make decisions that would be different from what you would have wanted.

A durable power of attorney (DPOA) enables you to authorize a family member or other trusted individual to make financial decisions or transact business on your behalf, even if you become incapacitated. The designated individual can do things like pay everyday expenses, collect benefits, watch over your investments, and file taxes.

There are two types of DPOAs: (1) an immediate DPOA, which is effective at once (this may be appropriate, for example, if you face a serious operation or illness), and (2) a springing DPOA, which is not effective unless you become incapacitated.

Advance medical directives

Advance medical directives let others know what forms of medical treatment you prefer and enable you to designate someone to make medical decisions for you in the event you can't express your own wishes. If you don't have an advance medical directive, health-care providers could use unwanted treatments and procedures to prolong your life at any cost.

There are three types of advance medical directives. Each state allows only a certain type (or types). You may find that one, two, or all three types are necessary to carry out all of your wishes for medical treatment.

- A living will is a document that specifies the types of medical treatment you would want, or not want, under particular circumstances. In most states, a living will takes effect only under certain circumstances, such as a terminal illness or injury. Generally, one can be used only to decline medical treatment

that "serves only to postpone the moment of death."

- A health-care proxy lets one or more family members or other trusted individuals make medical decisions for you. You decide how much power your representative will or won't have.
- A do-not-resuscitate (DNR) order is a legal form, signed by both you and your doctor, that gives health-care professionals permission to carry out your wishes.

Will

A will is quite often the cornerstone of an estate plan. It is a formal, legal document that directs how your property is to be distributed when you die. If you don't leave a will, disbursements will be made according to state law, which might not be what you would want.

There are a couple of other important purposes for a will. It allows you to name an executor to carry out your wishes, as specified in the will, and a guardian for your minor children.

The will should be written, signed by you, and witnessed.

Most wills have to be probated. The will is filed with the probate court. The executor collects assets, pays debts and taxes owed, and distributes any remaining property to the rightful heirs. The rules vary from state to state, but in some states smaller estates are exempt from probate or qualify for an expedited process.

Letter of instruction

A letter of instruction is an informal, nonlegal document that generally accompanies your will and is used to express your personal thoughts and directions regarding what is in the will (or about other things, such as your burial wishes or where to locate other documents). This can be the most helpful document you leave for your family members and your executor.

Unlike your will, a letter of instruction remains private. Therefore, it is an opportunity to say the things you would rather not make public.

A letter of instruction is not a substitute for a will. Any directions you include in the letter are only suggestions and are not binding. The people to whom you address the letter may follow or disregard any instructions.

Take steps now

Life is unpredictable. So take steps now, while you can, to have the proper documents in place to ensure that your wishes are carried out.

If you're the parent or grandparent of a current or prospective college student, you might be interested to learn what's new in the world of higher education.

Higher college costs

For the 2018-2019 school year, average costs for tuition, fees, room, and board were:

- \$21,370 at public colleges (in-state)
- \$37,430 at public colleges (out-of-state)
- \$48,510 at private colleges

The following table shows the average annual percent increase for tuition, fees, room, and board since 2015.¹ Despite steady cuts to their budgets from state legislatures, public colleges have been doing a better job of holding down cost increases than private colleges.

	Public In-State	Public Out-of-State	Private
2015-16	3.3%	3.5%	3.5%
2016-17	2.7%	3.4%	3.4%
2017-18	3.1%	3.2%	3.5%
2018-19	2.8%	2.6%	3.2%

Assuming a 3% across-the-board increase, average costs for 2019-2020 would be:

- \$22,011 at public colleges (in-state)
- \$38,552 at public colleges (out-of-state)
- \$49,965 at private colleges

Keep in mind that these figures are averages; many colleges cost substantially more. And these figures don't include costs for books, supplies, personal expenses, or transportation, which can add on a few thousand dollars. If you're a parent and cost is a factor when looking at colleges, you need to take the lead in the conversation because most 16-, 17-, and 18-year-olds are not financially savvy enough to drive a \$100,000 or \$200,000 decision.

Higher student debt

Speaking of costs, about 65% of U.S. college seniors who graduated in 2017 had student loan debt, owing an average of \$28,650.² And it's not just students who are borrowing. Parents are borrowing, too. There are approximately 15 million student loan borrowers age 40 and older, and this demographic accounts for almost 40% of all student loan debt.³ Student loan debt is now the second-highest consumer debt category after mortgage debt, ahead of both credit cards and auto loans.⁴

Reduced asset protection allowance

Behind the scenes, a stealth change in the federal government's financial aid formula has been quietly (and negatively) impacting families. The asset protection allowance, which lets parents shield a certain amount of their non-retirement assets from consideration, has been steadily declining for years, resulting in a higher expected family contribution, or EFC. Ten years ago, in the 2008-2009 school year, the asset protection allowance for a 48-year-old married parent was \$46,700. In 2018-2019, that same allowance was \$21,300, resulting in a \$1,432 decrease in a student's aid eligibility (\$25,400 x 5.64%, the federal contribution percentage required from parent assets).⁵

FAFSA timeline

The FAFSA (Free Application for Federal Student Aid) for the 2020-2021 school year can be filed starting October 1, 2019, and relies on information in your 2018 federal income tax return.

Proposed 529 plan changes

In April 2019, the House Ways and Means Committee passed the Setting Every Community Up for Retirement Enhancement (SECURE) Act, which focuses primarily on changes to retirement plans but also includes the expansion of 529 plans.⁶ Under the proposed legislation, 529 plan qualified expenses would be expanded to include:

- Apprenticeship programs
- Up to \$10,000 (lifetime cap) toward student loan repayment

The legislation has broad bipartisan support, so look for progress in 2019.

Recent college admissions scandal

Finally, a little perspective. The recent college admissions scandal has put a spotlight on the frenzy surrounding elite college admissions and perpetuates the notion that a child's attendance at a particular school is a make-or-break, life-defining moment. But families shouldn't buy into this narrative. Reach for the best schools? Sure, if that's important to you and your child. Think your child's life is over if he or she doesn't get into one of these schools? No. Many colleges provide an excellent education, and it's up to students to make the most of the opportunities available wherever they land.

Have you checked your tax withholding lately?

If you were unpleasantly surprised by the amount of tax you owed or the amount of your tax refund when you filed your 2018 tax return, it may be time to check your withholding.

It may also be time if there are changes in your life or financial situation that affect your tax liability. For example, have you recently married, divorced, had a child, purchased a new home, changed jobs, or had a change in the amount of your taxable income not subject to withholding (e.g., capital gains)?

You can generally change the amount of federal tax you have withheld from your paycheck by giving a new Form W-4 to your employer. You can use a number of worksheets for the Form W-4 or the IRS Withholding Calculator (available at irs.gov) to help you plan your tax withholding strategy.

If changes reduce the number of allowances you are permitted to claim or your marital status changes from married to single, you must give your employer a new Form W-4 within 10 days. You can generally submit a new Form W-4 whenever you wish to change your withholding allowances for any other reason.

In general, you can claim various withholding allowances on the Form W-4 based on your tax filing status and the tax credits, itemized deductions (or any additional standard deduction for age or blindness), and adjustments to income that you expect to claim. You might increase the tax withheld or claim fewer allowances if you have a large amount of nonwage income. (If you have a significant amount of nonwage income, you might also consider making estimated tax payments using IRS Form 1040-ES.) The amount withheld can also be adjusted to reflect that you have more than one job at a time and whether you and your spouse both work. You might reduce the amount of tax withheld by increasing the amount of allowances you claim (to the extent permissible) on the Form W-4.

You can claim exemption from withholding for the current year if: (1) for the prior year, you were entitled to a refund of all federal income tax withheld because you had no tax liability; and (2) for the current year, you expect a refund of all federal income tax withheld because you expect to have no tax liability.

Do I need to pay estimated tax?

Taxpayers are required to pay most of their tax obligation during the year by having tax withheld from their paychecks or pension payments, or by making estimated tax payments. Estimated tax is the primary method used to pay tax on income that isn't subject to withholding. This typically includes income from self-employment, interest, dividends, and gain from the sale of assets. Estimated tax is used to pay both income tax and self-employment tax, as well as other taxes reported on your income tax return.

Generally, you must pay federal estimated tax for the current year if: (1) you expect to owe at least \$1,000 in tax for the current year, and (2) you expect your tax withholding and refundable tax credits to be less than the smaller of (a) 90% of the tax on your tax return for the current year, or (b) 100% of the tax on your tax return for the previous year (your tax return for the previous year must cover 12 months).

There are special rules for farmers, fishermen, and certain high-income taxpayers. If at least two-thirds of your gross income is from farming or fishing, you can substitute 66-2/3% for 90% in general rule (2)(a) above. If your adjusted

gross income for the previous year was more than \$150,000 (\$75,000 if you were married and filed a separate return for that year), you must substitute 110% for 100% in general rule (2)(b) above.

If all of your income is subject to withholding, you probably don't need to pay estimated tax. If you have taxes withheld by an employer, you may be able to avoid having to make estimated tax payments, even on your nonwage income, by increasing the amount withheld from your paycheck.

You can use Form 1040-ES and its worksheets to figure your estimated tax. They can help you determine the amount you should pay for the year through withholding and estimated tax payments to avoid paying a penalty. The year is divided into four payment periods. After you have determined your total estimated tax for the year, you then determine how much you should pay by the due date of each payment period to avoid a penalty for that period. If you don't pay enough during any payment period, you may owe a penalty even if you are due a refund when you file your tax return.

Withholding and estimated tax payments may also be required for state and local taxes.
